ABSTRACT

In the process of China's development from a high starting point to high quality, China's economy is gradually changing to high quality, high efficiency, and low cost. Engineering enterprises are a key link to the national economy and social development. Only by adopting scientific management means and advanced cost control strategies can they stand out in the fierce market competition and achieve sustainable development. At the same time, due to the complexity and uncertainty of the project itself, the enterprise has produced certain construction cost management problems in the process of marketization, which constrains the development strategic goals of the enterprise and the effectiveness of construction management, thus also putting forward higher requirements for the cost management of construction projects. In the project cost control and management work, the company should implement the scientific and reasonable project cost control and management concept, strictly follow the process of project cost management, clarify the main contents of project cost management, grasp the key issues of project cost management, and take corresponding measures. This article aims to study the new era of engineering cost control management most

effectively, to improve the company's engineering management level, and effectively reduce the cost of the company, through the characteristics of the project and the current project cost control status analysis, in the case of not affect the project operation, achieve the purpose of reducing cost efficiency. According to the current cost management strategy, compare the cost control ability of similar projects at home and abroad, decompose the various factors of the cost composition, compare and analyze the cost difference one by one, and find out the key problems to be solved. On this basis, the appropriate cost control measures are adopted to achieve the purpose of cost control, so that the company's various cost indicators reach a reasonable range to improve the economic benefits of the enterprise.

Keywords: engineering project; cost control; cost analysis; management
