ABSTRACT

With the rapid development of China's economy, all walks of life have put forward higher requirements for practical talents, and professional, standardized and international IT shortage talents are even more difficult to find. Articles of the State Council and the Ministry of Education, the Ministry of Labor and Social Security, information industry, advocate and encourage social forces, vigorously cultivate our country compound, skilled talents "much starker choices-and graver consequences-in", the CPC Central Committee attaches great importance to vocational education, further defined the function and role of vocational education, determine the vocational education and general education is two different types of education, build up the modern vocational education system, promote vocational education into a new stage of the development of high quality. With the development and transformation of China's economy, the demand for talents has also changed, and the career development and education industry have a bright future. With the arrival of industrial Revolution 4.0, the global talent training is facing the problem of comprehensive upgrading, vocational education has been paid unprecedented attention, by more and more government institutions, vocational colleges and enterprises attention, ushered in a

new development opportunity. Vocational education has broad prospects, and IT vocational education is the most active part of it. In the face of the expanding IT talent gap, the global IT vocational education has also mushroomed like bamboo shoots after a spring rain, opening the mission of cultivating and conveying talents. As a group education that directly cultivates practical talents on the frontline, vocational education directly creates wealth for the society, and plays an important role in the development of national economy. To solve the difficulties of national economic development, to cope with the situation of the spread and aggravation of the international financial crisis, to promote the upgrading of the industrial structure, and to change the development mode, are all inseparable from vocational education.

Keywords: IT vocational education; status quo analysis; development trend
