## ABSTRACT

The world today is in the double stage of economic recovery and epidemic prevention and control, which testing the company's methods and effects in emergency response and stable production. The epidemic of Covid-19 has changed the working mode of many companies. As a result, diversified work contents, flexible work methods and online work places have become the normal conditions for staff under the epidemic prevention and control. The occurrence of emergencies makes the change of work mode more flexible. In addition, with the development of advanced information technologies such as artificial intelligence, big data, cloud computing, Internet of Things, and blockchain, the development of online technology has been greatly promoted and a more diversified work mode has been created. In the post-epidemic era, how to use the power of advanced information technology to improve work efficiency and performance has become a key topic worthy of attention.
